

British Columbia forestry patches

59 files reviewed · 57 images · 2 PDFs · 109 PDF pages

Ten editable reconstruction entries, with source photographs kept beside the drafts.

Six Forestry cloth designs, one related Parks cloth design, one unconfirmed cloth design and two non-patch emblems. The ten entries are not ten verified Ministry-issued patches.

The supplied folder was reviewed at file level. All PDF pages were visually screened; the large crest on physical page 75 of the FOI package was examined at full source resolution. Tiny, blurred collector-board fragments are not confidently identifiable.

Use the companion catalogue. Open [index.html](#) for all comparisons, the searchable 59-file register, SVG downloads and custom live-lettering controls. Outlined SVGs are font-independent; editable text requires the chosen local typefaces.

Important limits. Historical tree scenery still needs its own primitives. The map/animal and shoulder drafts are exploratory. Colours are visual estimates, not verified thread specifications. No patch adoption dates are inferred from the source filenames.

Comparison sheet 1 of 5

F01 Forest Service / light lettering band

Forestry cloth | Reconstruction draft

REFERENCE S46

VECTOR DRAFT

Shared tree geometry reused. Letterform proportions and the photographed mountain/ground treatment still need specimen-specific calibration.

S46 [Open source in Drive](#)

F02 Forest Service / green and gold oval

Forestry cloth | Reconstruction draft

REFERENCE S47

VECTOR DRAFT

Low-resolution screenshot; colours are visual estimates. This is not an authenticated thread palette.

S47 [Open source in Drive](#)

Comparison sheet 2 of 5

F03 Forest Service / green decal reference

Non-patch emblem | Reconstruction draft

REFERENCE S35

VECTOR DRAFT

A decal, not evidence of a cloth patch. Historic tree/mountain linework differs from the shared contemporary scene.

S35 Open source in Drive

F04 Forest Service / shoulder rocker

Forestry cloth | Experimental reconstruction

REFERENCE S44, S56

VECTOR DRAFT

FOREST and SERVICE occupy the side arms; BRITISH/COLUMBIA belongs on the small central oval. Do not map this to Airtanker wings.

S44 Open source in Drive

S56 Open source in Drive

Comparison sheet 3 of 5

F05 Forest Service shield + Fire Control

Forestry cloth | Reconstruction draft

REFERENCE S49

VECTOR DRAFT

Different silhouette and identity from the oval. The central crest uses the supplementary editable provincial source; the PofBC import hook replaces it with the exact repository asset.

S49 Open source in Drive

F06 B.C. Forest Service / map and animal

Forestry cloth | Experimental reconstruction

REFERENCE S45

VECTOR DRAFT

The animal silhouette and stylized BC outline are schematic redraws from a blurred screenshot. Not suitable as a fidelity-approved master.

S45 Open source in Drive

Comparison sheet 4 of 5

F07 Map-and-tree square / affiliation unconfirmed

Unconfirmed affiliation | Experimental reconstruction

REFERENCE S48

VECTOR DRAFT

The screenshot has no identifying wording. Its association with this collection is not proof of ministry ownership, issue date or official use.

S48 Open source in Drive

F08 Long ministry + Wildfire Service

Forestry cloth | Reconstruction draft

REFERENCE S43

VECTOR DRAFT

Wording is legible in the cloth photograph. Shared wildlife vectors retained; embroidery, precise band width and mixed-case letterforms are not manufacturing-calibrated.

S43 Open source in Drive

Comparison sheet 5 of 5

F09 Forest Service / Parks lower plate

Related Parks cloth | Reconstruction draft

REFERENCE S26

VECTOR DRAFT

Forestry/Parks transition-style composition, kept separate from direct Ministry of Forests items. Plate, pale border and thin lettering need individual specimen fitting.

S26 Open source in Drive

F10 British Columbia / Ministry of Forests

Non-patch emblem | Reconstruction draft

REFERENCE S58 / physical page 75

VECTOR DRAFT

Clean crest artwork from physical page 75 of the 107-page FOI PDF, not a photographed cloth patch. Mixed-case wording is preserved; issue period is not inferred from the FOI filename.

S58 Open source in Drive

What the survey establishes

The clean Ministry of Forests crest

Physical page 75 of Response_Package_FOR-2023-32179.pdf provides a large wildlife crest with “British Columbia” above and “Ministry of Forests” below. It is valuable artwork evidence, but it does not establish a cloth patch issue or adoption date.

Different shapes need different renderers

The shoulder rocker is not the Airtanker winged badge. The Fire Control example uses a tapered shield, a provincial crest and a separate upper tab. The map/animal rectangle and unlabelled map/tree square cannot be recreated by changing oval text alone.

What was actually reused

All 11 forestoval ART strings were checked against its current hash manifest at commit 244276dcf0b55e14b694b5cee569c78a978cc734. Its shared frame and scenes are used in these drafts. The PofBC adapter targets the PROVINCIAL_MARK export; the delivered shield currently uses supplementary original editable provincial artwork, not a claimed byte-identical PofBC asset.

Items deliberately kept separate

The inventory includes numerous Parks patches and metal badges, Forestry metal badges, decals, posters, vessel markings and other archival material. S15/S16 are an exact duplicate. S50 remains unresolved; the blurred wording has not been invented. S32 identification-card imagery is not reproduced.

Before a production-quality reconstruction

Add historic tree/mountain/water variants; fit lettering to each specimen; obtain clearer images for the map/animal and unresolved oval; confirm dates independently; and specify physical dimensions, thread colours, borders and stitch construction with the maker. These SVGs are not stitch files.

Validation performed

Twenty SVGs passed XML, internal-reference, unique-ID, raster-free and text-fit checks. The self-contained catalogue was exercised in headless Chromium at desktop and mobile widths, including filtering and live text editing. These checks establish technical usability, not photographic fidelity or official approval.
